CONSOLIDATED PORTFOLIO CONTENT PACKAGE & EVIDENCE MATRIX

1. COMPLETE PROJECT INVENTORY

Every distinct project across all notebook sources has been extracted, merged, and categorized by evidence type 1-3.

A. Implemented Applications & Public Codebases (Tier 1 Proof)

1. Contract Risk Governance Engine (Nexus Governance OS)

- **Category:** Applied AI & Risk Governance 4, 5
- **Project Type:** Competition Entry (AMD Slingshot Hackathon 2026) 4, 5
- **Description:** A zero-hallucination, audit-grade contract intelligence system that separates deterministic compliance logic on CPU from AI-generated narrative explanations 4, 5.
- **Problem:** Traditional LLM contract review tools use unconstrained reasoning, creating hallucinations, non-reproducible outputs, and legal compliance risks 4-6.
- **Candidate Contribution: System Architecture Lead** (designed 5-layer decision-first pipeline and compliance locking) 4, 7.
- **Collaborators:** Team *Nexus Architects* (Tanishq Khanna — Full-Stack Engineering; Tanish Sabharwal — AI Optimization) 4, 7.
- **Technologies:** Python 3.10+, FastAPI (/evaluate, /health), Streamlit UI, FAISS vector search, SHA-256 document hashing, ONNX Runtime with DirectML 4, 7.
- **Methodology:** Fixed policy rules evaluate contract text on CPU first; immutable SHA-256 fingerprints and JSONL decision traces are recorded; AI layer is constrained to explaining rule outcomes offloaded to AMD Ryzen™ AI NPU via DirectML 4-6.
- **Results:** Offloading narrative generation to AMD Ryzen™ AI NPU via DirectML achieved **~420ms latency per explanation** (~4x speedup vs CPU) on a 120-page test contract under Windows 11, reducing CPU utilization from 85–95% down to 25–35% 4, 5.
- **Limitations:** NPU acceleration benchmarks are specific to AMD Ryzen™ AI hardware with DirectML under Windows 11 as documented in the repository README 5, 7.
- **Status:** Completed codebase (57 commits, MIT License) 4, 7, 8.
- **Available Evidence:** GitHub Repo: https://github.com/akshit-sukhija/contract-risk-governance 9, 10.

2. Notice Decoder (College Notice Schedule Planner)

- **Category:** AI Automation & Full-Stack Web Application 11-13
- **Project Type:** Competition Entry & Prototype (SETU 2026 Problem Statement PS-02) 12, 13

- **Description:** An intelligent web app that converts unstructured college notices into organized events, detects schedule clashes, and exports .ics calendar files 13-15.
- **Problem:** Academic notices distributed via WhatsApp forwards, text, and PDFs contain dates, times, and venues buried in unstructured text, causing missed deadlines and schedule overlaps 12, 13.
- **Candidate Contribution: Team Leader & System Architect** (shaped system architecture, local parser design, and conflict detection logic) 12, 13.
- **Collaborators:** Team *Signal Forge* (Tanya Garg — Co-Creator & Repository Host) 12, 13, 16.
- **Technologies:** React, TypeScript, Vite, Express, Tailwind CSS, Featherless API (Qwen2.5-7B-Instruct), Render web hosting, RFC 5545 .ics generator 11-13.
- **Methodology:** Local deterministic token parsing (Parsing: Local Deterministic) extracts dates and time intervals without LLM schedule hallucination; time-interval overlap algorithms flag collisions; semantic diff engine (Notice Change Radar) tracks circular updates 12, 15.
- **Results:** Flagged a 30-minute interval overlap between *Internal Test 2* (10:00–11:30 AM) and *Guest Lecture* (11:00 AM–12:30 PM) on 13 Nov 2026, while correctly identifying a 12:00 PM lab submission deadline 15.
- **Limitations:** Built for educational/demo use; free Render hosting tier exhibits cold-start delays on initial load 17.
- **Status:** Fully completed & live deployed web application 12, 13.
- **Available Evidence:** Live Demo: https://notice-decoder-ai-powered-college-notice.onrender.com/ 13, 16; GitHub Repo: https://github.com/Tanya-garg10/Notice-Decoder-AI-Powered-College-Notice-Schedule-Planner 13, 14, 18; Report PDF: SETU2026_Round2_PS02_SignalForge_NoticeDecoder.pdf 12, 13; Presentation: SETU2026_Round1_PS02_NoticeDecoder_SignalForge.pptx 15.

3. Lureline (Cyber Deception Investigation Workbench)

- **Category:** Cyber Analytics & Automation Workbench 19, 20
- **Project Type:** Competition Entry (ORCATHON 2026 Cybersecurity & Blockchain) 19, 20
- **Description:** An evidence-first cyber deception investigation workbench that ingests synthetic event streams across simulated network nodes, detects decoy interactions, and visualizes attacker movement 19, 20.
- **Problem:** Investigating cyber attacks across decoy/honeypot assets often suffers from opaque inferences or fabricated network hops 20.
- **Candidate Contribution: 100% Solo Candidate** 19, 20.
- **Technologies:** TypeScript (90%), CSS, HTML, Vite, Express, Vercel hosting, Node.js 19-21.
- **Methodology:** Ingests deterministic event streams across a 6-node network (4 ordinary assets, 2 decoy assets); applies transparent rules to detect decoy hits; reconstructs sequential movement paths without inventing unobserved hops 20.
- **Results:** 100% pass on automated test suite (npm test); automated CI validation via GitHub Actions (.github/workflows/lureline-validation.yml); live Vercel deployment 21.
- **Limitations:** All input datasets are synthetic demonstration fixtures created for competition evaluation 20.

- **Status:** Live deployed application 19, 20.
- **Available Evidence:** Live Demo: https://lureline-orcathon-2026.vercel.app/ 19; GitHub Repo: https://github.com/akshit-sukhija/lureline-orcathon-2026 19, 20.

4. Clarity Redemption AI (Mutual Fund Consequence Engine)

- **Category:** Applied AI & FinTech Math Engine 22-24
- **Project Type:** Competition Entry & Prototype (Produscope 2026 - E-Cell IIT Guwahati) 23-25
- **Description:** A context-aware mutual fund redemption workspace displaying exact FIFO unit lot consumption, exit load, STT deductions, and remaining holding value prior to redemption confirmation 23, 24, 26.
- **Problem:** Indian retail mutual fund investors face extreme information asymmetry during redemption, as deductions, lot rules, and exit loads are scattered across fund SID documents 23, 24.
- **Candidate Contribution: Co-Developer & Product Analyst** (Team Leader: Devanshi Pandey; Team Member: Akshit Sukhija) 24, 25.
- **Technologies:** TypeScript (98.7%), Vite, React, Deterministic FIFO Math Engine, Ask Clarity LLM explainer 27-29.
- **Methodology:** Deterministic calculation engine executes all financial math on single-source-of-truth rules; AI serves strictly as an explanation layer ("Ask Clarity") bounded to scenario figures; blocks buy/sell/hold advice 28, 30, 31.
- **Results:** Passed **15/15 automated unit tests** (npm test) verifying FIFO boundaries, full liquidation, 365-day holding period logic, and mathematical invariants; 0 linter errors (tsc --noEmit) 29.
- **Limitations:** Product prototype using illustrative NAVs and sample fund SID data; not connected to live AMC order routing APIs 29, 32.
- **Status:** Live prototype & open-source codebase 22, 25, 27.
- **Available Evidence:** Studio Prototype: clarity-redemption.ai.studio 24, 25; GitHub Repo: https://github.com/akshit-sukhija/Clarity-Redemption-AI 22, 33; Report PDF: Produscope 2026 ,E-Cell IIT Guwahati...pdf 24, 25.

5. Tweet Sentiment Analysis

- **Category:** Machine Learning & NLP 34, 35
- **Project Type:** Independent / Educational Project 34, 35
- **Description:** Natural language processing pipeline classifying tweet sentiment using trained machine learning models 34, 35.
- **Problem:** Text classification and sentiment evaluation on micro-blogging social data 34.
- **Candidate Contribution: 100% Solo Candidate** 34, 35.
- **Technologies:** Python, Scikit-learn, TF-IDF Vectorizer, Logistic Regression, Naive Bayes, SVM, Random Forest, BERT, Pickle (.pkl), Flask (app.py) 34, 35.
- **Methodology:** Vectorized Sentiment140 dataset using TF-IDF; trained multiple classifiers; serialized model artifacts to .pkl files; built Flask web endpoint (app.py) 34, 35.
- **Results:** Serialized sentiment model (sentiment_model.pkl) and vectorizer (vectorizer.pkl) integrated into Flask backend 35.

- **Limitations:** Baseline NLP implementation built on historical Sentiment140 dataset 34.
- **Status:** Completed repository 35, 36.
- **Available Evidence:** GitHub Repo: https://github.com/akshit-sukhija/tweet-sentiment-analysis 36, 37.

B. Evaluated Data & Analytical Reports (Tier 2 Proof)

6. Decoding Customer Value (D2C Customer Intelligence)

- **Category:** Data Analytics & Business Intelligence 11, 38, 39
- **Project Type:** Academic / Competition Project (IIT Guwahati Summer Analytics) 11, 38
- **Description:** Direct-to-Consumer retail customer analytics separating promotional dependency from organic repeat purchasing 38, 39.
- **Problem:** D2C retail brands confuse total purchase spend with organic brand loyalty, giving away excessive discounts to bargain hunters and degrading profit margins 38.
- **Candidate Contribution: Lead Product Analyst** (co-authored with Bhumika Singhal) 38.
- **Technologies:** Python (pandas, numpy, seaborn), SQL (CASE statements, window functions), Power BI (.pbix), Jupyter (.ipynb) 11, 38, 39.
- **Methodology:** Cleaned 3,900 transactional records; feature engineering (Promo_Dependency_Score, Loyalty_Score_A, Loyalty_Score_B); SQL segmentation; promotional sunsetting strategy 38, 40.
- **Results:** Identified that **43.0% of customers were "Discount Survivors"** (1.00 promo dependency) vs **36.4% "Premium Loyalists"** (0.00 promo dependency); proved spend tier alone fails to indicate organic brand loyalty 38.
- **Limitations:** Findings describe the specific supplied dataset (\\(N=3,900\\)) and are not general retail benchmarks 40.
- **Status:** Completed 5-part deliverable suite & public repository 11, 39, 40.
- **Available Evidence:** GitHub Repo: https://github.com/akshit-sukhija/IITG_Decoding_Customer_Value_Akshit_Bhumika 41, 42 (contains Deliverable-1_Cleaned_Dataset.csv, Deliverable-1_Python_Notebook.ipynb, Deliverable-2_SQL_Analysis_Report.pdf, Deliverable-3_PowerBI_Dashboard.pbix, Deliverable-4_Retention_Playbook.pdf, Deliverable-5_Executive_Summary.pdf).

7. SentinelX / DSARS (Digital Security Assessment & Reporting Platform)

- **Category:** Data Engineering & Cybersecurity Systems 43-45
- **Project Type:** Academic Capstone Project (IITM Summer Training) 40, 45, 46
- **Description:** Centralized web platform ingesting Nmap XML and OWASP ZAP XML/CSV scanner logs, recording SHA-256 document fingerprints, storing SQLite ORM models, and generating ReportLab PDF reports 44, 47, 48.
- **Problem:** Security analysts waste hours manually parsing, deduplicating, and formatting raw Nmap/ZAP scanner outputs into executive vulnerability reports 44, 48.
- **Candidate Contribution: Co-Developer & System Architect** (with Adyot Ohri; summer training project submitted to IITM; 100-Hour Cybersecurity Certificate from SSSAM Academy) 40, 45, 46.

- **Technologies:** Python 3.x, FastAPI, React 19 (Vite), SQLite (SQLAlchemy ORM), Recharts, ReportLab PDF, ThreadPoolExecutor, Kali Linux (Nmap, OWASP ZAP) 43, 47, 48.
- **Methodology:** Multithreaded inspection orchestrator using Python ThreadPoolExecutor (max 11 workers) in api/security.py executing 8 parallel security routines (scan_ports, check_headers, run_nmap, get_whois, etc.); SHA-256 integrity verification; deduplication; normalization into 5 severity tiers (Critical to Info); automated PDF report generation 40, 47, 48.
- **Results:** Automated security log normalization, deduplication, interactive dashboard visualization, and instant ReportLab PDF executive report generation 48.
- **Limitations:** Academic capstone built for controlled evaluation environments; source code is documented in report PDF but lacks a public GitHub URL in notebook sources 40, 45.
- **Status:** Completed academic project & 100+ page formal report 40, 45, 49.
- **Available Evidence:** Formal Academic Report PDF: FINAL COMPLETE SENTINEL PROJECT REPORT-merged.pdf 45, 49.

8. UIDAI Demographic Update Intelligence

- **Category:** Data Science & Public Policy Analytics 9, 17, 50
- **Project Type:** Competition Entry (UIDAI Data Hackathon 2026, Team ID: UIDAI_7528) 17, 50
- **Description:** Spatial and temporal analysis of official UIDAI demographic update data (March–December 2025) using Pandas, NumPy, and Matplotlib in Google Colab 9, 17, 50.
- **Problem:** Public identity systems need geographic and demographic visibility to spot mobility trends, youth participation drop-offs, and service demand hotspots 9, 50.
- **Candidate Contribution: Individual Lead Analyst** 17, 50.
- **Technologies:** Python, Pandas, NumPy, Matplotlib, Seaborn, Google Colab 11, 17, 50.
- **Methodology:** Analyzed 500,000+ aggregated records across 956 districts and 19,607 pincodes; applied 3-layer indicator framework (geography, month, age group) 9, 17.
- **Results:** Uncovered an **11% youth update participation gap** (ages 5–17); identified high adult mobility corridors in Uttar Pradesh (~2.19M updates), Bihar (~1.25M), and Maharashtra (~1.22M) 17.
- **Limitations:** Update volumes alone are indirect signals and do not constitute direct causal proof of migration or service access quality 19.
- **Status:** Completed hackathon report & Colab notebook 11, 17, 50.
- **Available Evidence:** Colab Notebook: https://colab.research.google.com/drive/17bSIIzpAwQZnbobBpOfM6El0EARxvHka?usp=sharing 19; Hackathon PDF Report: https://drive.google.com/file/d/1zqx6leQ_AfNaTrs6qAp-V9ntYI5oSNHY/view?usp=sharing 19, 51 (Note: duplicate Drive link in PDF; see audit).

9. OTT Viewer Retention Analysis (Winter Consulting Capstone)

- **Category:** Data Analytics & Media Retention 52, 53
- **Project Type:** Academic Capstone Project (Winter Consulting, Dec 2025) 52, 53

- **Description:** Data-driven diagnosis of mid-season viewer disengagement across streaming platforms 52, 53.
- **Problem:** Viewers disengage most frequently during mid-season episodes (Episodes 4–8), reducing ad revenue and complicating renewal decisions 52.
- **Candidate Contribution: 100% Solo Candidate** (Presented by Akshit Sukhija, IITM) 52.
- **Technologies:** Python (data cleaning, metric computation, episode segmentation), SQL-style aggregation, Power BI / Tableau, Pearson correlation, Logistic regression 52.
- **Methodology:** Random stratified sampling of \\(N=33,171\\) episodes (2020–2024) across Netflix (12,742), Prime Video (7,120), Hulu (6,310), and Crunchyroll (6,999); analyzed completion rate, continuation rate, hook strength (1–10), narrative complexity (1–10), and pause frequency 52.
- **Results:** Diagnosed mid-season drop-off spike (Episodes 4–8 at **16.7% drop-off** vs 11.8% Ep 1–3); identified positive correlation between narrative complexity and drop-off risk (Pearson \\(r \approx +0.57, p < 0.01\\)); proved strong cliffhanger endings mitigate churn even for complex episodes (hook strength 8–10 \\(\rightarrow \approx 4.2\%\\) drop-off vs 19.7% for weak hooks) 52.
- **Limitations:** Findings reflect trends within the supplied dataset and are not universal streaming industry benchmarks 52.
- **Status:** Completed analytical report PDF 12, 52.
- **Available Evidence:** Report PDF: 01_OTT_Viewer_Retention_Report.pdf 52.

10. DMI Finance 27-Call QA Review (Total Value Audit - TVA)

- **Category:** Operations Analytics & Quality Audit 54, 55
- **Project Type:** Quality Assurance Audit Project (October 2026) 54, 55
- **Description:** Structured evaluation of 27 debt collection call records across 22 Total Value Audit (TVA) parameters in Excel 54, 55.
- **Problem:** Auditing debt collection call quality, detecting CRM disposition errors, and flagging fatal compliance overrides across multi-lingual collection calls 55, 56.
- **Candidate Contribution: 100% Solo Auditor** 54, 55.
- **Technologies:** Excel workbook analysis, 22 Total Value Audit (TVA) parameters, Call Quality (CQ) formula scoring 55.
- **Methodology:** Evaluated 27 debt collection calls across 22 parameters (Greeting, TPC verification, RPC confirmation, EMI negotiation, CRM disposition, PTP confirmation, etc.); computed Call Quality scores and fatal override flags (P11 TPC breach, P16 CRM disposition error, P21 fee disclosure failure, P22 PTP defect) 55-58.
- **Results:** Audited 27 multi-lingual calls across Hindi, Hinglish, Kannada, Malayalam, Marathi, Tamil, Telugu; identified fatal compliance overrides causing 0.0% CQ scores on specific calls 55-65.
- **Limitations:** Audit covers provided sample transcripts; contains sensitive borrower PII 55, 56, 65.
- **Status:** Completed audit workbook 54, 55.
- **Available Evidence:** Document: DMI_Finance_27_Call_QA_Review_Oct_2026.docx 54, 55.

11. SikshaSarovar UnlockPro Paywall Test Suite

- **Category:** Software Quality Assurance 66
- **Project Type:** Software QA Testing Deliverable 66
- **Description:** Executed test matrix evaluating paywall functional stability, access permissions, and edge cases 66.
- **Problem:** Verifying functional correctness and security boundary enforcement for digital learning platform subscriptions 66.
- **Candidate Contribution: Group 3 Testing Contributor** (Akshit) 66.
- **Technologies:** Software Quality Assurance, Functional Testing, Equivalence Class Partitioning (ECP), Boundary Value Analysis, Test Matrix Design (CSV) 66.
- **Methodology:** Designed and executed 40+ test cases covering authentication, payment processing, subscription unlocks, coupon validation, concurrency, and session expiration 66.
- **Results:** Executed 40+ test cases logged in CSV test matrix 66.
- **Limitations:** Manual QA test execution matrix file 66.
- **Status:** Executed test matrix CSV file 66.
- **Available Evidence:** CSV File: SikshaSarovar_UnlockPro_Testing_Group3_Final.xlsx_-_AKSHIT_.csv 66.

C. Applied AI, Prompt Systems & Frameworks (Tier 2/3 Proof)

12. SIGNAL (Delta Detector with Consequence Lens)

- **Category:** Applied AI & Prompt Architecture 47, 66, 67
- **Project Type:** Competition Entry (PromptForge #1, Forge Realm) 47, 66
- **Description:** System prompt engine with two-layer state tracking that filters multi-channel sprint updates into 4 output dispositions: SIGNAL, WATCH, CLARIFY, or SUPPRESS 47, 66, 67.
- **Problem:** Team leads are buried in multi-channel updates (Slack, email, rule changes, mentor feedback), making it hard to see if an update requires action 66.
- **Candidate Contribution: 100% Solo Candidate** (Akshit Sukhija, GGSIPU 3rd Year) 66.
- **Technologies:** Locked V2.1 System Prompt Architecture, Lovable web prototype builder, Gemini execution, ChatGPT red-teaming 46, 66-68.
- **Methodology:** Prompt engine with two-layer state tracking (Strategy, Assumptions, Risks, Requirements), material delta detection, source hierarchy, temporal validation, evidence discipline 67.
- **Results:** Evaluated against a frozen 40-case adversarial development set: **95.0% classification accuracy** (38/40 cases), 100% precision, 100% recall on critical compliance cases 18, 67.
- **Limitations:** Evaluation metrics reflect performance on a designed 40-case test set 18, 67.
- **Status:** Completed system prompt & web prototype 47, 66.
- **Available Evidence:** Live Prototype: https://delta-focus.lovable.app 66; Report PDF: Akshit_Sukhija_SIGNAL_Prompt_Forge.pdf 47, 66.

13. ResolX Omvia Speech-Call Sentiment Analysis

- **Category:** Applied AI & Solutioning Architecture 25, 69, 70
- **Project Type:** Internship Solutioning Deliverable (ResolX.ai / One Point One Technology Labs) 18, 25, 70
- **Description:** Research and solutioning report exploring how acoustic signals and transcript text could be combined for call-center sentiment analysis 25, 70.
- **Problem:** Single-modal text sentiment misses acoustic voice cues (tone, rate of speech, dead air) in customer support calls 55, 70.
- **Candidate Contribution: AI Solutioning Intern** (researched requirements, reviewed Omvia UI mockups, drafted multimodal sentiment guidelines and human-in-the-loop review workflows) 18, 25, 70.
- **Technologies:** Multimodal sentiment framework, acoustic signal integration guidelines, human-in-the-loop review workflow 25, 70, 71.
- **Methodology:** Audited Omvia UI mockups; defined Not Clear escalation boundaries; established continuous quality review loops 70, 71.
- **Results:** Authored formal solutioning report (ResolX_Omvia_Speech_Call_Sentiment_Analysis_Report.pdf) 69, 70.
- **Limitations:** Solutioning deliverable only; explicitly NOT evidence of a trained or deployed production model 25, 70, 71.
- **Status:** Completed research & solutioning report PDF 25, 69, 70.
- **Available Evidence:** Report PDF: ResolX_Omvia_Speech_Call_Sentiment_Analysis_Report.pdf 69, 70.

14. InsightForge / InsightForgeAI

- **Category:** Applied AI & Research Synthesis 22, 46
- **Project Type:** Personal Prototype & Web Application 22, 46
- **Description:** AI-assisted web application extracting claims from unstructured text, surfacing contradictions, and producing structured decision briefs 22, 46.
- **Problem:** Manual research synthesis across messy documents is slow and prone to missed contradictions 22, 46.
- **Candidate Contribution: 100% Solo Candidate** 22, 46.
- **Technologies:** AI-assisted web development (Lovable, ChatGPT, Gemini), Vercel hosting 46, 68.
- **Methodology:** 5-stage research workflow: Extract claims \\(\rightarrow\\) Compare & analyze \\(\rightarrow\\) Verify with sources \\(\rightarrow\\) Synthesize output 22.
- **Results:** Functioning web prototype deployed on Vercel 46.
- **Limitations:** Built as an exploratory research synthesis tool 46.
- **Status:** Completed prototype 46, 72.
- **Available Evidence:** Live Web View: Insight Forge 72; Mentioned in PDF: Akshit_Sukhija_CareerWithDishani_Research_Intern.pdf 22, 73.

15. Aviation Voice Agent System Prompt

- **Category:** Applied AI & Prompt Engineering 34, 74
- **Project Type:** Applied Prompt Asset 34, 74
- **Description:** System prompt architecture for an Akasa Air flight-cancellation customer support voice agent 74.

- **Problem:** Voice AI agents need to resolve customer flight cancellation requests safely and naturally with minimal conversational turns 74.
- **Candidate Contribution: 100% Solo Candidate** 34, 74.
- **Technologies:** System prompt engineering, conversational state machine, fallback rules 74.
- **Methodology:** Enforced "Listen first", minimal verification turns, and strict flight cancellation handling verbiage 74.
- **Results:** Production system prompt document 34, 74.
- **Limitations:** Prompt specification asset 34, 74.
- **Status:** Completed prompt asset 34, 74.
- **Available Evidence:** Document: Aviation_Voice_Agent_System_Prompt_Updated.docx 34, 74.

16. AI YouTube Script Writing OS

- **Category:** Technical Scriptwriting Operating System 69, 75
- **Project Type:** Application Operating System Asset 69, 75
- **Description:** 7-stage scriptwriting operating system for educational tech YouTube channels (*Mediocre Kuch Kar* by Akber Shaikh) 69, 75.
- **Problem:** Educational YouTube channels suffer from audience drop-off due to weak hooks and unverified claims 75, 76.
- **Candidate Contribution: 100% Solo Candidate** 69, 75.
- **Technologies:** Multi-tool pipeline (NotebookLM channel intelligence \\(\rightarrow\\) Gemini topic research & hooks \\(\rightarrow\\) Claude script generation \\(\rightarrow\\) Perplexity fact checking \\(\rightarrow\\) Groq Hinglish editing \\(\rightarrow\\) 5-point retention stress test) 69, 76.
- **Methodology:** 7-stage pipeline combining channel style blueprints, Hinglish flow editing, and 5-point retention stress testing 69, 76.
- **Results:** Technical operating system document PDF 69, 75.
- **Limitations:** Operational scriptwriting framework document 69, 75.
- **Status:** Completed document asset 69, 75.
- **Available Evidence:** Report PDF: AI_YouTube_Script_Writing_OS.pdf 69, 75.

D. Unbuilt Product Concepts & Strategic Teardowns (Tier 3 Proof)

17. Nykaa Post-Purchase Retention ("Routine Start Coach")

- **Category:** Product Concept & UX Teardown 43, 53, 77
- **Project Type:** Independent Uncommissioned Concept 19, 49, 53
- **Description:** 12-slide teardown deck analyzing post-purchase user disengagement on Nykaa 49, 77.
- **Problem:** 62% of skincare buyers stop after one purchase because no guidance fires post-delivery, leaving 82 out of 100 buyers unengaged 77.
- **Candidate Contribution: 100% Solo Candidate** 43, 49, 53.
- **Technologies:** Product teardown, 12-slide presentation, 48-hour OMS delivery trigger loop 49, 77.
- **Methodology:** Analyzed 17 Play Store reviews; mapped post-purchase friction; designed 48-hr OMS trigger loop for routine formation and progress tracking 49, 77.

- **Results:** 12-slide product concept deck; explicitly 0 measured business impact 19, 49.
- **Limitations:** Independent concept; not commissioned by Nykaa; no live business results 19, 36.
- **Status:** Independent Concept 19, 49.
- **Available Evidence:** PDF: Akshit_Nykaa_Retention_Analysis.pdf 43, 77; Drive Link: https://drive.google.com/file/d/1zqx6leQ_AfNaTrs6qAp-V9ntYI5oSNHY/view?usp=sharing 36 (Note: duplicate Drive URL in PDF).

18. IndusShield Proactive AI Insurance Platform

- **Category:** FinTech & Product Concept 54, 78, 79
- **Project Type:** Competition Pitch Deck (Product Matters 6.0 Capstone, E-Cell IIT Guwahati x IndusInd General Insurance) 78, 79
- **Description:** AI-powered unified protection platform embedded within IndusInd Bank's mobile banking ecosystem 79, 80.
- **Problem:** Retail customers experience extreme fragmentation across their insurance lifecycle, treating insurance as an annual chore rather than an ongoing financial strategy 80.
- **Candidate Contribution: Individual Presenter** (Akshit Sukhija) 78, 79.
- **Technologies:** Product vision deck, 4 mobile UI wireframes, gamified "Shield Score" (85/100), bancassurance API middleware concept, banking transaction triggers 54, 79, 81, 82.
- **Methodology:** Defined 6 core MVP modules (Unified Dashboard, Smart Claims, Renewal Center, Emergency Hub, Shield Score, Context Nudges); mapped primary persona (Aarav Sharma, 29, Software Engineer) 81, 83, 84.
- **Results:** Capstone pitch deck and UI wireframes 78, 79.
- **Limitations:** Unbuilt competition pitch deck 78, 79.
- **Status:** Unbuilt Pitch Deck 78, 79.
- **Available Evidence:** PDF: IndusShield_ProductMatters6.0_AkshitSukhija.pdf 78, 79.

19. TrustFix C2C Marketplace

- **Category:** Marketplace UX & Product Concept 85, 86
- **Project Type:** Product Matters Case Study Deck 85, 86
- **Description:** Dual-sided C2C marketplace concept introducing escrow payment holds and service quality blueprints 86.
- **Problem:** Trust deficit, payment fraud, and service quality uncertainty in consumer-to-consumer services 86.
- **Candidate Contribution: 100% Solo Candidate** 85, 86.
- **Technologies:** Marketplace UX wireframes, service blueprinting, escrow payment hold logic 86.
- **Methodology:** Designed dual-sided marketplace UX with upfront escrow holds, verified provider profiles, and booking tracking 86.
- **Results:** Product case study deck 85, 86.
- **Limitations:** Unbuilt case study deck 86.
- **Status:** Unbuilt Case Study Deck 85, 86.
- **Available Evidence:** PDF: TrustFix_Product_Matters_Case_Study_Akshit_Sukhija.pdf 85.

20. RE:FRAME Smart Glasses

- **Category:** Hardware & AR Product Concept 18, 38
- **Project Type:** Unbuilt Hardware Concept Pitch Deck 18, 38
- **Description:** AR smart glasses product concept focusing on digital focus management 18, 38.
- **Problem:** Attention fragmentation and digital focus disruption 18, 38.
- **Candidate Contribution: Team Member** (Team ReviveX) 18, 38.
- **Technologies:** Product concept deck, AR UI focus engine mockups, hardware pricing tier (₹39,999) 18, 38.
- **Methodology:** Conceptualized AR smart glasses with focus management UI and multi-modal sensory feedback 18, 38.
- **Results:** Product concept deck 18, 38.
- **Limitations:** Unbuilt hardware concept 18, 38.
- **Status:** Unbuilt Concept 18, 38.
- **Available Evidence:** PDF: REFRAME_Smart_Glasses_Product_Concept.pdf 18, 38.

21. Clensta Brand Growth Memos

- **Category:** D2C Growth & Content Strategy 87-90
- **Project Type:** Internship Application Pitch Decks (Brand Marketing Internship Application 2026) 87-90
- **Description:** Growth operator pitch decks analyzing Clensta's IIT Delhi origin and waterless tech differentiation 89-91.
- **Problem:** Clensta possesses strong R&D heritage (IIT Delhi origin, waterless tech), but its content strategy felt generic 89, 91.
- **Candidate Contribution: 100% Solo Applicant** (Akshit Sukhija) 89, 90.
- **Technologies:** D2C growth operator framework, 90-day plan (Day 30 audit, Day 60 report, Day 90 playbook), creator brief hooks 92, 93.
- **Methodology:** Content gap diagnosis; consumer psychology mapping (Control factor for haircare, Confidence radiance for skincare, Smart-care for waterless); creator "Smart Tension" hooks 92, 94, 95.
- **Results:** 2 presentation decks (Clensta Brand Growth memo (1) (1).pptx, Clensta_Akshit_Sukhija (1).pptx) 87-90.
- **Limitations:** Uncommissioned internship application pitch decks 89, 90.
- **Status:** Internship Pitch Decks 87-90.
- **Available Evidence:** PPTX Files: Clensta Brand Growth memo (1) (1).pptx 87-89, Clensta_Akshit_Sukhija (1).pptx 78, 90.

E. Hackathons, Competition Submissions & Additional Projects (Tier 1/2 Proof)

22. Convolve 4.0 GenAI Document AI

- **Category:** Document AI & Information Extraction 43, 86
- **Project Type:** Hackathon Project (Convolve 4.0 GenAI Track) 68, 86
- **Description:** Offline multilingual document/invoice extraction solution 86.
- **Problem:** Offline extraction of structured data from multilingual documents/invoices without cloud APIs 86.

- **Candidate Contribution: Hackathon Participant** 68, 86.
- **Technologies:** Python, EasyOCR, Field Mapper, Visual Detector, Structured JSON output 86.
- **Methodology:** Offline OCR processing, field mapping, visual detection, structured JSON output (executable.py, requirements.txt) 44, 86.
- **Results:** Executable python pipeline 44.
- **Limitations:** Hackathon competition project 68, 86.
- **Status:** Completed hackathon project 68, 86.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 43, 86.

23. Rankistan (IPU Cutoff Parser & Web App)

- **Category:** Data Processing & Web Application 96-98
- **Project Type:** Personal / Educational Utility Project 96, 98
- **Description:** IPU college admission cutoff parser and web application 96, 98.
- **Problem:** Navigating unstructured Guru Gobind Singh Indraprastha University (GGSIPU) admission cutoff PDFs 96, 98.
- **Candidate Contribution: 100% Solo Developer** 96, 98.
- **Technologies:** Python, Data parsing, Information retrieval, Web application interface 96-98.
- **Methodology:** Parsed IPU cutoff tables into structured format for decision support 96, 97.
- **Results:** Web application parser 96, 98.
- **Limitations:** Educational utility tool 96, 98.
- **Status:** Completed application 96, 98.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 96 & Career_Direction_OS_Personal_Context_Brief.docx 97, 98.

24. Digital Mental Health Streamlit App

- **Category:** Streamlit Web Application 96, 99
- **Project Type:** Educational Application Project 96, 99
- **Description:** Streamlit web application in the digital mental health domain 96, 99.
- **Problem:** Interactive digital mental health assessment interface 96, 99.
- **Candidate Contribution: 100% Solo Developer** 96, 99.
- **Technologies:** Python, Streamlit, Web UI 96, 99.
- **Methodology:** Developed Streamlit frontend with interactive inputs 96, 99.
- **Results:** Streamlit web app 96, 99.
- **Limitations:** Educational project; does NOT imply clinical validity 96, 99.
- **Status:** Completed Streamlit app 96, 99.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 96 & Career_Direction_OS_Personal_Context_Brief.docx 99.

25. Zomato Data Analysis

- **Category:** Applied Data Analytics 97, 98
- **Project Type:** Educational Data Analytics Project 97, 98
- **Description:** Exploratory data analysis and visualization of Zomato dataset 97, 98.
- **Problem:** Analyzing restaurant performance, pricing, and review patterns 97, 98.
- **Candidate Contribution: 100% Solo Analyst** 97, 98.

- **Technologies:** Python, Pandas, Matplotlib, Seaborn 97, 98.
- **Methodology:** Exploratory data analysis (EDA), data cleaning, pattern extraction 97, 98.
- **Results:** Visualizations and business insights 97, 98.
- **Limitations:** Educational EDA project 97, 98.
- **Status:** Completed analysis 97, 98.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 97 & Career_Direction_OS_Personal_Context_Brief.docx 98.

26. Real-Time Dynamic Pricing Project

- **Category:** Analytics & Business Decision Systems 88, 97, 98
- **Project Type:** Educational / Concept Project 88, 97, 98
- **Description:** Analytical modeling and rule-based dynamic pricing simulation 88, 97, 98.
- **Problem:** Data-driven decision support for real-time price adjustment 88, 97, 98.
- **Candidate Contribution: 100% Solo Developer/Analyst** 88, 97, 98.
- **Technologies:** Python, Analytical modeling, Business logic 88, 97, 98.
- **Methodology:** Built rule-based pricing logic and analytical simulation 88, 97, 98.
- **Results:** Dynamic pricing simulation model 88, 97, 98.
- **Limitations:** Concept project 88, 97, 98.
- **Status:** Completed concept model 88, 97, 98.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 88, 97 & Career_Direction_OS_Personal_Context_Brief.docx 98.

27. Ayushman Events Operational System

- **Category:** Applied Business Operational System 88
- **Project Type:** Applied Business Context Project 88
- **Description:** Operational information management system for an event agency 88.
- **Problem:** Operational workflow organization and business process management for event operations 88.
- **Candidate Contribution: System Developer / Analyst** 88.
- **Technologies:** Process mapping, workflow organization, software system design 88.
- **Methodology:** Analyzed event agency business processes and built an operational management system 88.
- **Results:** Client-facing operational system implementation 88.
- **Limitations:** Applied operational project 88.
- **Status:** Completed client-facing system 88.
- **Available Evidence:** Cited in Akshit Sukhija Personal Brand OS.docx 88.

28. Career Strategy & Personal Positioning Frameworks (Personal Brand OS, Career Direction OS, Strategic Career Playbook)

- **Category:** Personal Positioning & Career Engineering 75, 97, 100
- **Project Type:** Personal Strategy Documents 75, 97, 100
- **Description:** Master career strategy documents mapping the candidate's trajectory as an AI Systems Analyst / AI-Native Product Analyst 1, 100, 101.
- **Problem:** Structuring personal positioning, skill mapping, income strategy, and portfolio ecosystem 100, 102, 103.

- **Candidate Contribution: 100% Solo Candidate** 75, 97, 100.
- **Technologies:** Word documents (Akshit Sukhija Personal Brand OS.docx, Career_Direction_OS_Personal_Context_Brief.docx, strategic_career_playbook_akshit_v2.docx, AI_Freelance_and_Micro_Agency_Strategy_Summary.docx) 75, 97, 100, 104, 105.
- **Methodology:** Structured career operating systems, portfolio auditing, positioning strategy 100, 102, 103.
- **Results:** 4 master strategy documents 75, 97, 100, 104, 105.
- **Limitations:** Internal career strategy documents 75, 97, 100.
- **Status:** Completed strategy documents 75, 97, 100, 104, 105.
- **Available Evidence:** Word documents in notebook 75, 97, 100, 104, 105.

29. PORTFOLIO AUDIT (Master Blueprint & Source Audit)

- **Category:** Portfolio Audit & System Specification 2
- **Project Type:** Master Blueprint File 2
- **Description:** Structured 3-part audit analyzing 48 notebook sources, 5 reference portfolios (Nakul Chaturvedi, Pankaj Studio, BALAJI P, Simran Singh, Arsheen Arshid), visual design tokens, 8 independent page blueprints, and Google AI Studio build prompt 2, 106-110.
- **Problem:** Auditing fragmented portfolio materials, establishing truth standards, resolving discrepancies, and designing a multi-page web architecture 2.
- **Candidate Contribution: 100% Solo Candidate** 2.
- **Technologies:** Markdown document (PORTFOLIO AUDIT) 2.
- **Methodology:** Evidence classification (Tiers 1–3), reference pattern synthesis, marksheet reconciliation, 8-page Next.js architecture design 2.
- **Results:** Complete portfolio audit and generation blueprint 2.
- **Limitations:** Documentation and architecture specification file 2.
- **Status:** Active Master Audit File 2.
- **Available Evidence:** File PORTFOLIO AUDIT in /workspace/knowledge/ 2.

3. EXISTING VS. MISSING WEBSITE COMPARISON

The pasted portfolio audit and current website repository blueprint describe a **5-project website layout** (or 8-page architecture) 2. Comparing that structure against the complete 29-project notebook inventory reveals key gaps and misalignment:

```
┌──────────────────────────────────────────────────────────────────────────────────────────────────────────────────────┐
│                                                EXISTING VS. MISSING WEBSITE COMPARISON                               │
├──────────────────────────┬──────────────────────────────────────────┬──────────────────────────────────────────────┤
│ FEATURED WEBSITE SLUG    │ INVENTORY PROJECT NAME                   │ EVALUATION & ALIGNMENT                       │
├──────────────────────────┼──────────────────────────────────────────┼──────────────────────────────────────────────┤
│ /work/notice-decoder     │ Notice Decoder                           │ ✅ EXISTING: Deployed Render app + SETU 2026 docs.  │
├──────────────────────────┼──────────────────────────────────────────┼──────────────────────────────────────────────┤

```

Key Findings & Corrections:

1. **Unrepresented High-Quality Technical Assets:** *Clarity Redemption AI* (Produscope 2026 prototype, 15/15 passed npm unit tests, clean TypeScript) and *UIDAI Demographic Intelligence* (500,000+ records analyzed in Colab) have strong proof but were left off the primary 5-project website list 17, 22, 27, 29.

2. **Repository Discrepancy:** *SentinelX / DSARS* is heavily featured on the website blueprint, but its source code is currently embedded only inside a 100+ page PDF report rather than an active public GitHub repository 40, 45, 49.
3. **Repository Account Attribution:** *Notice Decoder* is hosted under co-creator Tanya-garg10 on GitHub, requiring clear attribution of Akshit Sukhija as Team Leader & System Architect 12, 16.
4. **Duplicate Drive URL Mismatch:** In Akshit_Sukhija_DigiStreet_Portfolio_.pdf, the exact Drive URL (1zqx6leQ_AfNaTrs6qAp-V9ntYI5oSNHY) was reused for both UIDAI and Nykaa 19, 36.

4. RECOMMENDED FLAGSHIP PROJECTS VS. PROJECT LIBRARY

To maximize impact for clients and recruiters, the 29 projects are partitioned into **5 Flagship Case Studies** (headliners) and **Secondary Project Library Entries** based on evidence quality 2, 11, 38.
